

## Data Quality Manager (RWD)

### Description

Clinigen is a rapidly growing global specialty pharmaceutical and services company with a unique combination of businesses. Our divisions operate in a complex global regulatory environment and ensure that vital medicines are delivered securely on time and wherever they are needed in the world.

We are currently 1,100 people headquartered in the UK with global offices in the US, EU, JAPAC and South Africa. Clinigen has grown rapidly since it began in 2010 and is positioned well for an exciting future of continued expansion.

### The Role:

We are seeking a detailed orientated, collaborative and process driven Data Quality Manager to form part of our leading edge Real World Data team. The RWD Quality Manager is responsible for ensuring the quality, accuracy, and integrity of data collected and managed by the RWD team. This role involves establishing a data quality framework and conducting rigorous data reviews, identifying discrepancies, and collaborating with cross-functional teams to ensure compliance with data management standards and regulatory requirements.

### Key Responsibilities:

#### Teamwork and Leadership

- Provide strategic leadership and expert support for the program.
- Responsible for resolving data-related issues with the extended RWD team.
- Responsible for overseeing and leading discussions with the risk governance and audit teams.
- Provide advice on issues of governance and quality.
- Collaborate with the RWD Analytics team to ensure adherence to data quality control plans and project timelines.

#### Communication

- Responsible for the management of quality monitoring and risk reports, highlighting key areas of concern to wider team/business.
- Actively participate in internal, external, and client meetings or audits for data acquisition process and documentation.
- Responsible for training wider RWD Team on quality processes as part of team Learning & Development (L&D).
- Communicates/escalates quality/compliance issues (incl. any potential trends) to necessary stakeholders.

#### Analytics and Technical

- Responsible for developing and maintaining a data governance framework that focuses on risk management, data quality and continuous improvement.
- Accountable for the design and delivery of quality data systems used for reporting and managing RWD collection and for ensuring that these systems are fit for purpose.
- Provide expert advice on data entry, data validation checks, and edit checks
