

Technology Consultant IoT and Asset Management – Voorburg

Description

As a Technology Consultant IoT & Asset Management with our partner you will play a crucial role in accelerating the sustainable energy transition in the Netherlands. You will ensure the robustness of their systems by ensuring impeccable availability and performance, and take the lead in shaping a continuous improvement path. You will coordinate major changes and system upgrades, implement monitoring systems, ensure secure access to digital assets, and monitor the integrity and accuracy of data related to their digital assets and components.

Responsibilities

- Application management duties for the Asset Management Systems.
- Maintain overview of all digital assets and digital access in collaboration with the realization and management departments
- Coordination of changes and upgrades for new functions and security measures
- Monitoring the connection by implementing monitoring systems and coordinating the resolution of disruptions
- Implementing and testing connections
- Ensuring access to the digital assets by requesting and realizing data connections and linking the digital meters and readers to management and reporting systems
- Monitor the completeness and accuracy of data on digital assets and components.

WHAT PROBLEM THE CANDIDATE WILL SOLVE

You will solve problems related to the availability and performance of our systems, the implementation of new features and security measures, and the integrity and accuracy of data related to our digital assets and components.

Qualifications

The ideal candidate has extensive knowledge of ICT and digitalization, specifically focused on **IoT applications**.

He or she has experience with monitoring and digital measurement systems for managing complex installations and environments, and has experience as **Project Leader, Product Owner or Scrum Master**. The candidate has knowledge of **service management processes according to ITIL and ITSM**, and is proficient in **implementing and configuring complex IT solutions such as IoT, VPN and network architectures**. The candidate is fluent in both *Dutch* and *English*, both verbal and written.

Sample search profile:

ICT infrastructure manager who also wants to be more involved in applications and business processes, Data center manager who wants to monitor other type of installation, network consultant who wants to broaden his work horizon. Service manager who wants broader responsibility. Manager of Building Management Systems or ITSM systems.
